Contents:

Pages

A `gs.content.base.SitePage` is a concrete class that can be used for creating pages in GroupServer.

class `gs.content.base.SitePage` (*context*, *request*)

A page on a GroupServer site

Parameters

- **context** – The context of the page
- **request** – The current HTTP request

siteInfo

A `Products.GSContent.view.SiteInfo` instance representing the current site. Like all *info* classes it has a name, url, and id.

loggedInUserInfo

A `Products.CustomUserFolder.userinfo.GSUserInfo` instance, representing the currently logged in user. Like all *info* classes it has a name, url, and id. In addition it has an anonymous property, which is set to `True` if the user is not logged in.

1.1 Example

It can be used with just ZCML. For example, the help-index is defined in `gs.help`:

```
<browser:page
  name="index.html"
  template="browser/templates/help.pt"
  for=".interfaces.IGSHelp"
  class="gs.content.base.SitePage"
  permission="zope.Public"/>
```

Changelog

2.1 2.0.5 (2016-01-15)

- Moving the documentation to [Read the Docs](#)

2.2 2.0.4 (2014-10-10)

- Naming the reStructuredText files as such
- Pointing at [GitHub](#) as the canonical repository

2.3 2.0.3 (2014-01-30)

- Updating the product metadata

2.4 2.0.2 (2013-08-09)

- Fixing the encoding of the Python code
- Updating the product metadata

2.5 2.0.1 (2013-07-25)

- Updating the README

2.6 2.0.0 (2012-10-29)

- Adding the `SitePage` class to the `__init__.py`
- Updating the product dependencies

2.7 1.0.2 (2012-07-03)

- Adding some imports

2.8 1.0.1 (2012-01-09)

- Fixing a typing mistake

2.9 1.0.0 (2011-11-17)

Initial version. Prior to the creation of this product the code was provided by `Products.GSContent`. The product defines the core class that is used to create [Pages](#) for [GroupServer](#) sites.

Indices and tables

- `genindex`
- `modindex`
- `search`
