This product provides the page that allows the site administrator to search the members of a [GroupServer](#) site, and a web hook to allow external systems to search for someone.

Contents:

The form `admin_search_people.html`, in the context of the site, allows the site administrator to search for a site member. If found the administrator is redirected to the profile-page for that person, otherwise an error is shown.

Note: The page is restricted to site members for privacy reasons.

The viewlet `gs-search-people-link` provides a link from the site-administration links ¹ to the *Search for people* page.

¹ See the `gs.site.change.base` product <<https://github.com/groupserver/gs.site.change.base>>

Web hook

2.1 Synopsis

```
/gs-search-people.json? token =<t> & user =<u> & search
```

2.2 Description

The web hook `gs-search-people.json`, in the *site* context, allows external systems to search for a person.

2.3 Required arguments

token=<token>

The authentication token ¹.

user=<emailOrId>

Either

- An email address belonging to the person, or
- The user-identifier for the person.

search

The “form” action (no value needs to be set, but the argument must be present).

Note: Unlike the page (see [Page](#)) the web hook searches **all people** that have a profile, regardless of their site membership. This can disclose a lot of information, so the data should be used cautiously.

2.4 Return value

If no profile was found then an empty **JSON** object is returned (`{ }`). Otherwise a **JSON** object is returned with the standard user-property values set (see [the core web-hook documentation](#)).

¹ See `gs.auth.token` for more information <<https://github.com/groupserver/gs.auth.token>>

2.5 Example

Using **wget** to retrieve the profile information for someone with the email address `a.person@home.example.com` from the web-hook at `groups.example.com`:

```
$ wget --post-data='token=fake&user=a.person@home.example.com&search' \
http://groups.example.com/gs-search-people.json
```

The returned JSON object:

```
{
  "id": "qK7SgjsTHcLNrJ2ClevcJ0",
  "name": "A. Person",
  "url": "https://groups.example.com/p/qK7SgjsTHcLNrJ2ClevcJ0",
  "email": {
    "all": [
      "a.person@home.example.com",
      "a.person@work.example.com"
    ],
    "other": [
      "a.person@work.example.com"
    ],
    "preferred": [
      "a.person@home.example.com"
    ],
    "unverified": []
  }
  "groups": [
    "example",
    "test"
  ],
}
```

Changelog

3.1 2.2.0 (2015-06-19)

- Adding the `gs-search-people.json` web-hook
- Adding Sphinx [documentation](#)

3.2 2.1.1 (2015-03-12)

- [FR] Adding a French translation, thanks to [Razique Mahroua](#)

3.3 2.1.0 (2014-10-24)

- Adding [internationalisation](#)
- Using [GitHub](#) as the main code repository, and naming the reStructuredText files as such.

3.4 2.0.1 (2014-06-12)

- Following the `gs.content.form.base` code

3.5 2.0.0 (2013-07-23)

- Updating to the new UI

3.6 1.1.0 (2012-07-23)

- Removing an adaptor

3.7 1.0.1 (2012-06-22)

- Update because of the change to SQLAlchemy

3.8 1.0.0 (2012-03-02)

- Initial version

Indices and tables

- `genindex`
- `modindex`
- `search`
